

Project Design Phase - I

Solution Architecture

Date: 19th September 2023

Team ID: Team - 592816

Project Name: Project - Arming Against Violence - Yolo-Based Weapon Detection

Maximum Marks: 4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.
